The Chronology of Thailand's Ocean Forecast System

OFDS Establishment

Ocean Forecasting Demonstration System (OFDS launched at the 8th IOC-WESTPAC Meeting in Bali, Indonesia

2012

Joint Cruise

conducted in GoT cooperated by DMCR and FIO aim to do model validation.

2015

Validate and Develop

CTD and mooring buoy being conducted in both ADS and GoT for validating and getting higher resolution

2020

2010

OFDS Website

operated by FIO funded by IOC-WESTPAC/SEAGOOS. It covered SCS

2013

OFS Thailand

official launched by cooperating between MNRE Thailand and SOA China.

2019

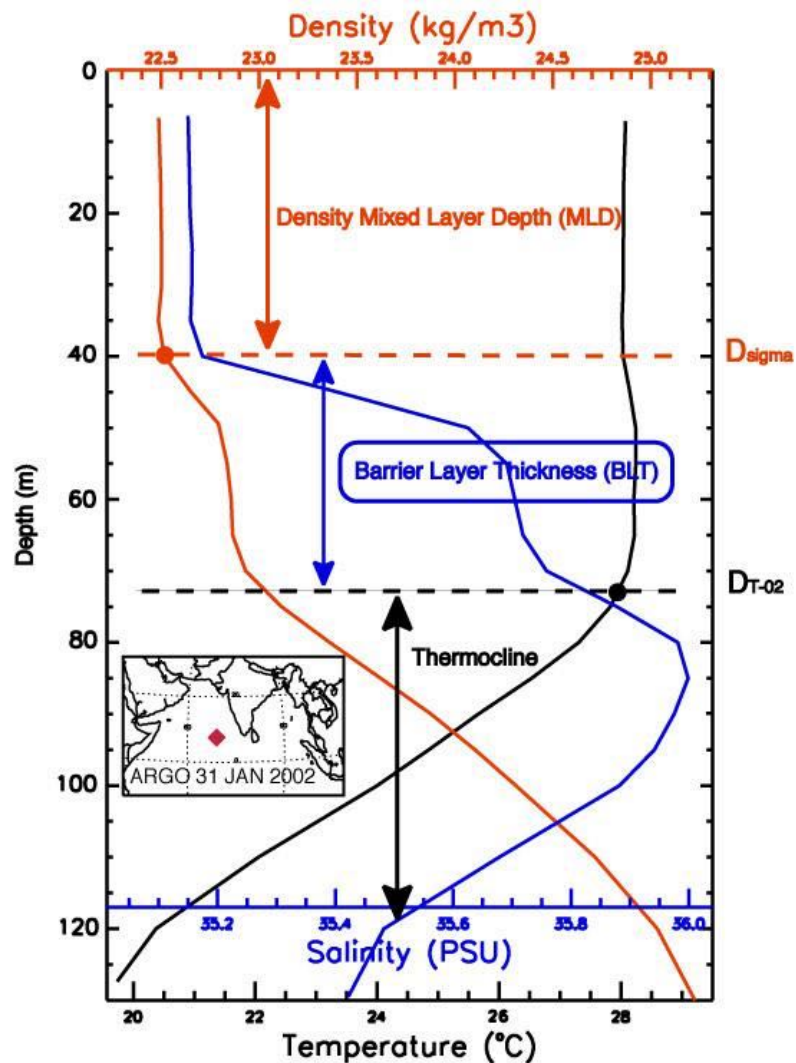

Hi Res OFS

Intended to be completed end of 2019 to early of 2020.

In the half-century, it was understood that breaking waves mainly affected the depth of mixed-layer depth, which is really important for the primary productivity and fishing products.

✓ Observation

✓ Model from POM

The challenge of ocean circulation model is that simulated sea surface temperature is overestimated while the sub-surface temperature is underestimated especially in summer time.

The non-breaking wave induced vertical mixing

Prof. Qiao Fangli and colleagues of First Institute of Oceanography, P.R. China proposed that the non-breaking surface wave could generate turbulence through wave-turbulence interaction and developed the wave-induced mixing theory.

It was the beginning of *MASNUM: Laboratory of MARine Sciences and NUMerical Modeling*

$$B_v = \alpha \iint_{\bar{k}} E(\bar{k}) \exp\{2kz\} d\bar{k} \frac{\partial}{\partial z} \left(\iint_{\bar{k}} \omega^2 E(\bar{k}) \exp\{2kz\} d\bar{k} \right)^{1/2}$$

$E(\mathbf{K})$ is the wave number spectrum which can be calculated from a wave numerical model. It will change with (x, y, t) , so B_v is the function of (x, y, z, t) .

Qiao et al, GRL, 2004; OD, 2010; RS, 2016

If we regard surface wave as a monochromatic wave,

$$B_v = \alpha A^3 k \omega e^{(-3kz)} = \alpha A u_s e^{(-3kz)},$$

↑ Stokes Drift

B_v is wave motion related vertical mixing instead of wave breaking.

Wave effects: MLD in summer (Qiao et al, OD, 2010)

MLD of the Southern
Pacific in Feb.

MLD of the Northern
Atlantic in Aug.

With wave-
induce mixing

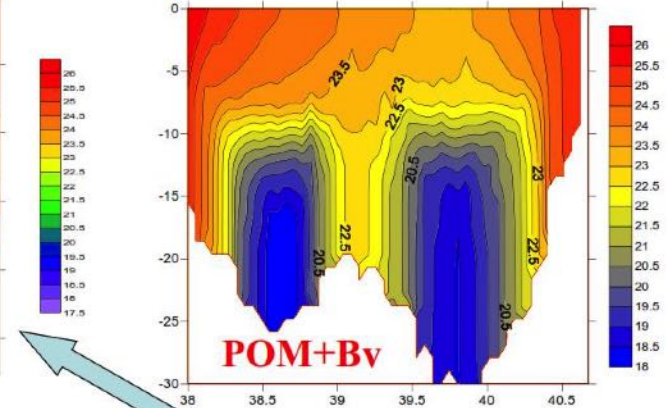

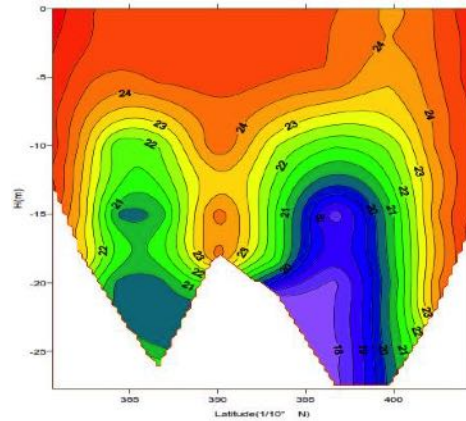

Without wave-
induce mixing

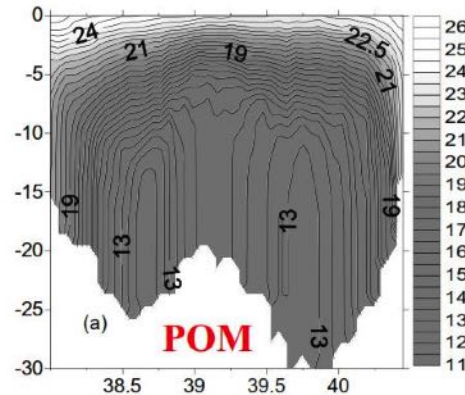

World Ocean Atlas

- After induced B_v to the model, the mixed-layer depth is more acceptable even in the south Pacific or the North Atlantic

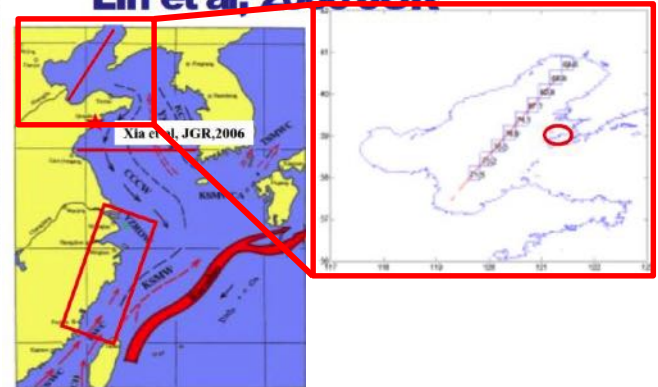

- After induced Bv to the model, the mixed-layer depth is more acceptable even in the south Pacific or the North Atlantic
- The cross-section temperature in Bohai Sea is more reliable

Observation in summer

Lin et al., 2006 JGR

MASNUM

- Wind speed
- Sea level pressure
- 2 meter air temperature
- Shortwave radiation
- Relative humidity

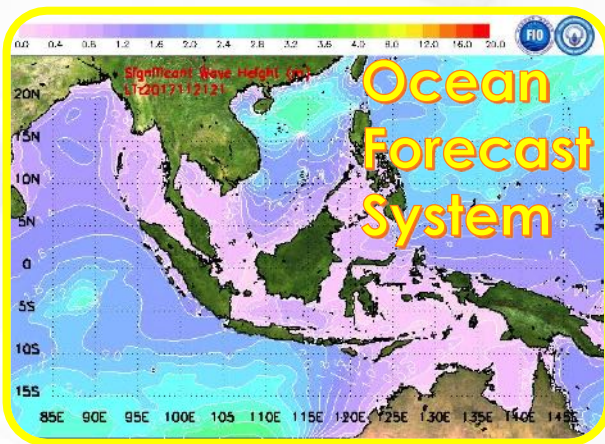

POM

- Current

Numerical Model @ PMBC

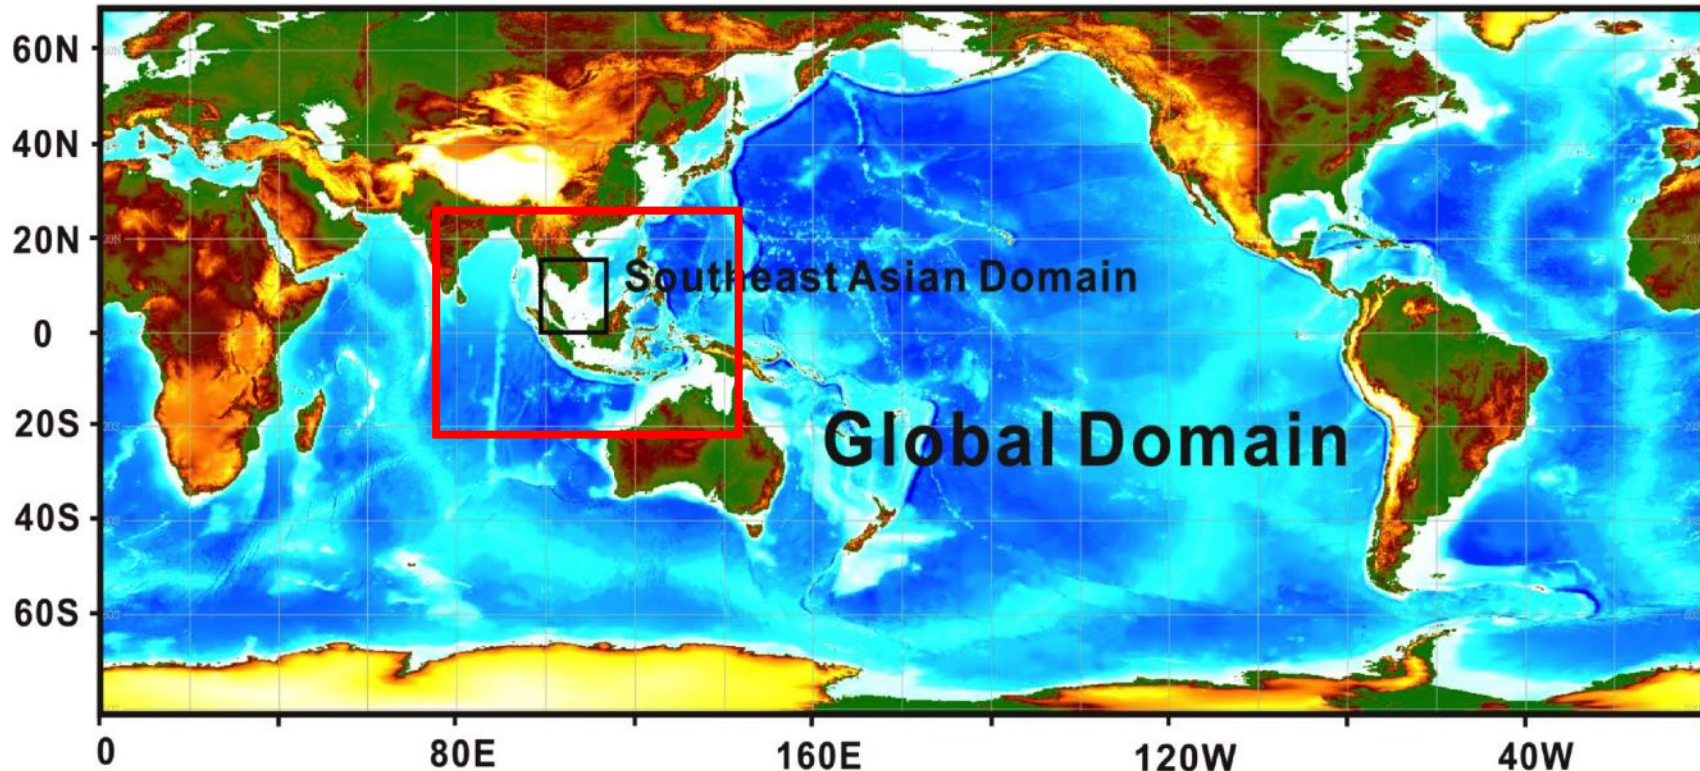

- **Wave model:** MASNUM (Laboratory of MArine Sciences and Numerical Modeling, State Oceanic Administration (SOA))
 - Domain: Global (Lat. 78S – 65N Lon. 0E – 360E)
 - Resolution: $\frac{1}{2} \times \frac{1}{2}$ Degree (~55 km)
 - Grids: Horizontal 721x 287

Numerical Model @ PMBC

- **Current model:** POM (Princeton Ocean Model)
 - Domain: Global (Lat. 78S – 65N Lon. 0E – 360E)
 - Resolution: $\frac{1}{2} \times \frac{1}{2}$ Degree (~55 km)
 - Grids: Horizontal 721x287, Vertical 21 Layers
 - Domain: Southeast Asia (Lat. 20S – 25N Lon. 80E – 150E)
 - Resolution: $\frac{1}{6} \times \frac{1}{6}$ Degree (~18 KM)
 - Grids: Horizontal 560x360, Vertical 51 Layers

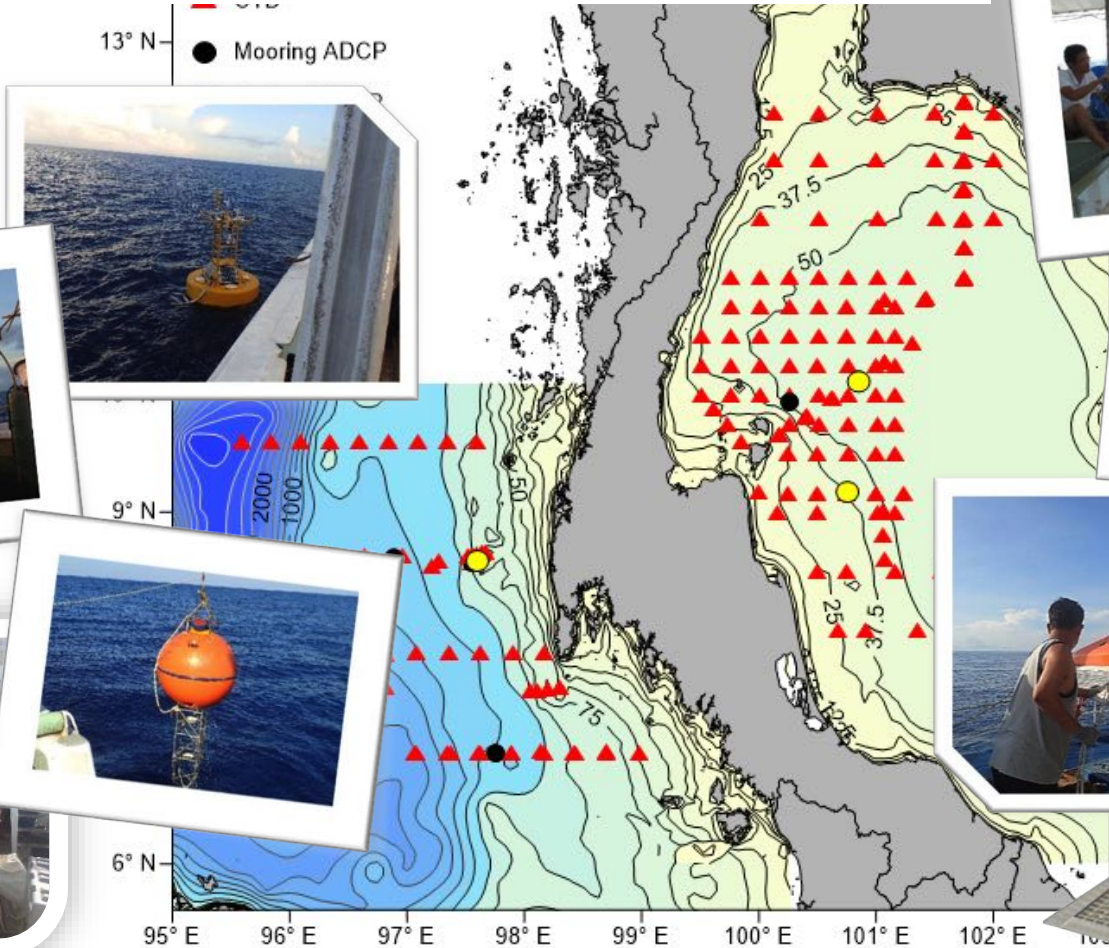

Southeast Asia model details

Domain	80° E – 150° E, 20° S – 25° N
Resolution	1/6° x 1/6°
Grids	Horizon: 421x271, Vertical: 21 layers
Results	July, 2015 – present

OFS joint cruises survey between 2013-2018

OFS practicing in Thailand

High performance computation and operational system for running and visualizing OFS through the web portal are setup at Phuket Marine Biological Center, Phuket, Thailand since 2015.

Observation data for OFS validation

OFS surface current

OFS sea

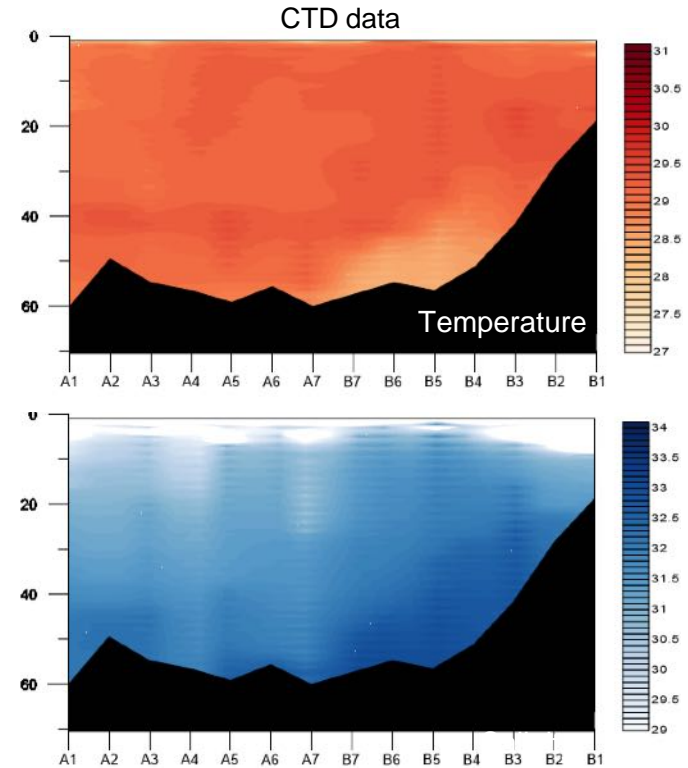

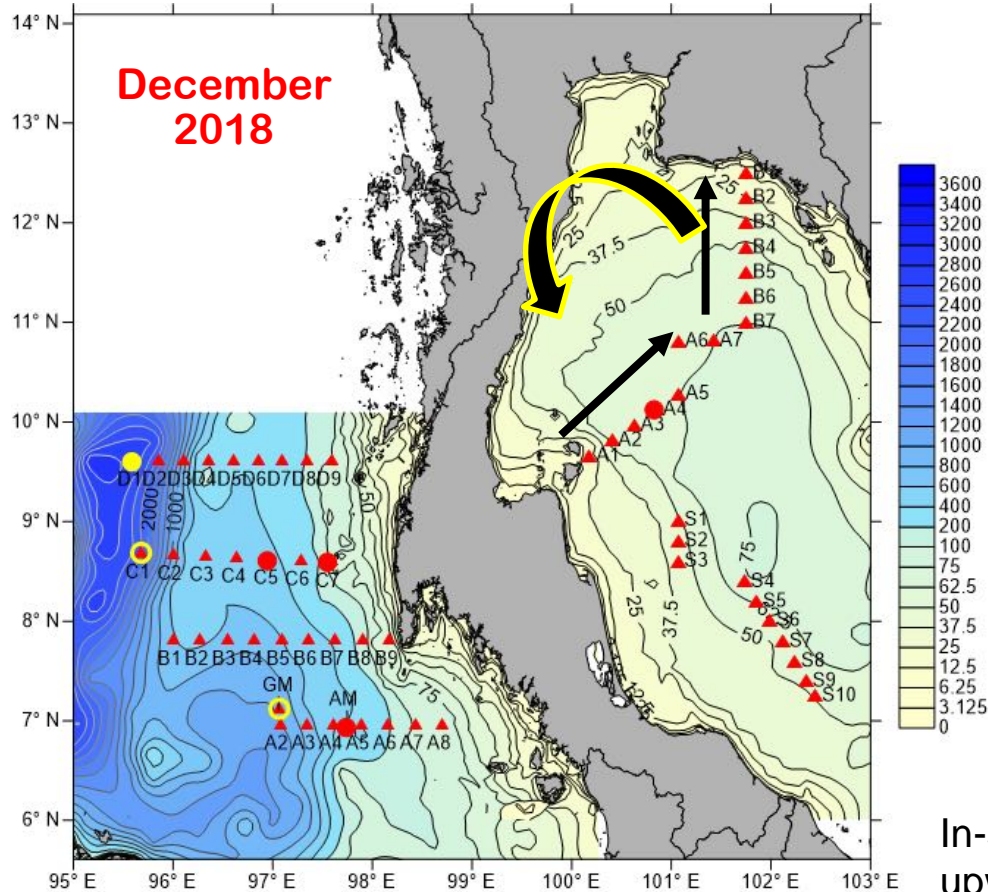

CTD data

OFS surface current represents clockwise circulation which affects to upwelling occurring nearby western Gulf of Thailand

Observation data for OFS validation

In-situ data in December 2018 shows upwelling nearby eastern Gulf of Thailand

OFS practicing – search and rescue

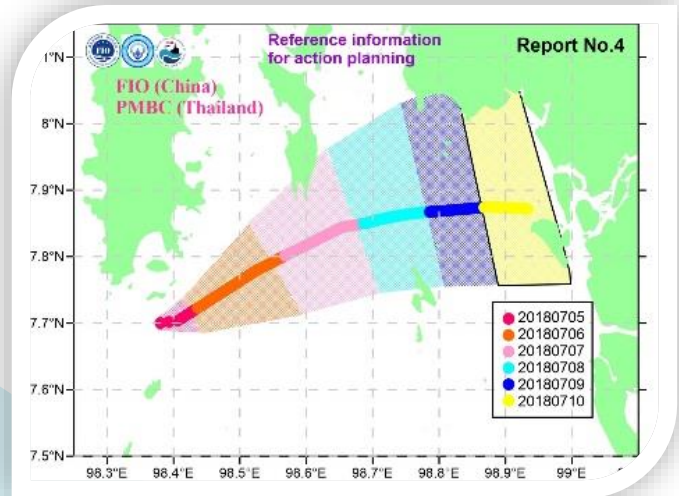

OFS (initial cond)
(13kmx13km)

High-resolution
OFS + M₂
3kmx3km

wave • circulation
+ tracer

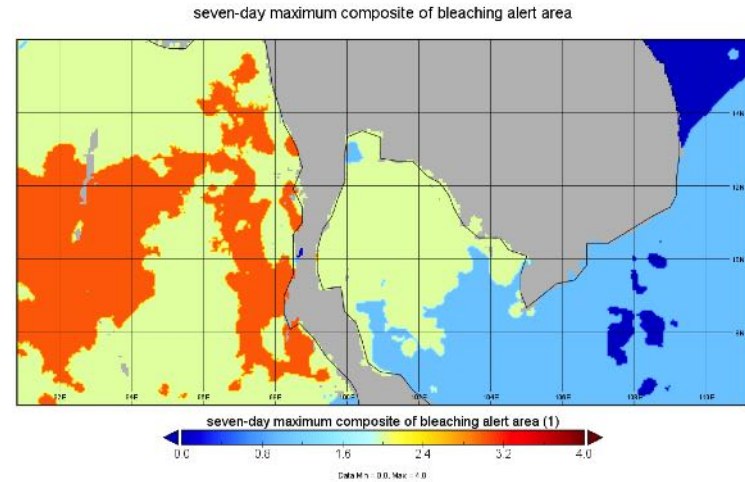

Rescue mission

July 5th, 2018 – more than 100 passengers lost cause by Phuket boat sank
OFS was one of model that run for search and rescue passengers between 5-11 July 2018

OFS practicing – coral bleaching alert

OFS can be used sea temperature data to calculate bleaching threshold to construct bleaching alert area which higher accumulate than global scale

OFS practicing – sediment transport

OFS can be used spatial and temporal wind data to do environmental impact assessment by suspended sediment near coastal zones

NE wind

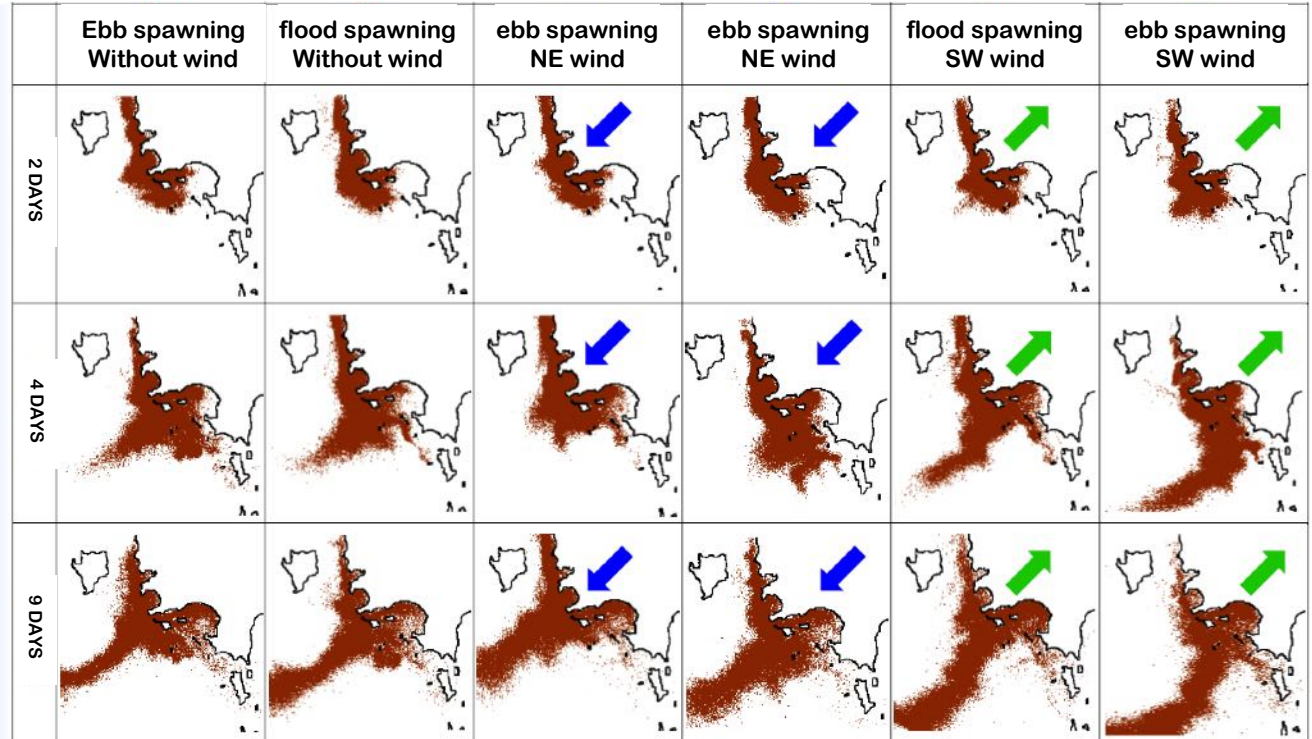

SW wind

OFS practicing – larvae dispersal

Nested-grid to study coral larvae distribution in 2, 4, and 9 days

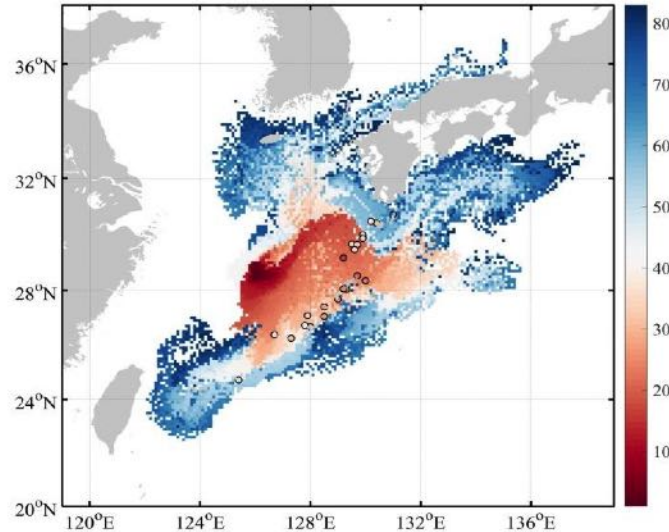

OFS (initial cond)

(Chanthasiri, 2015)

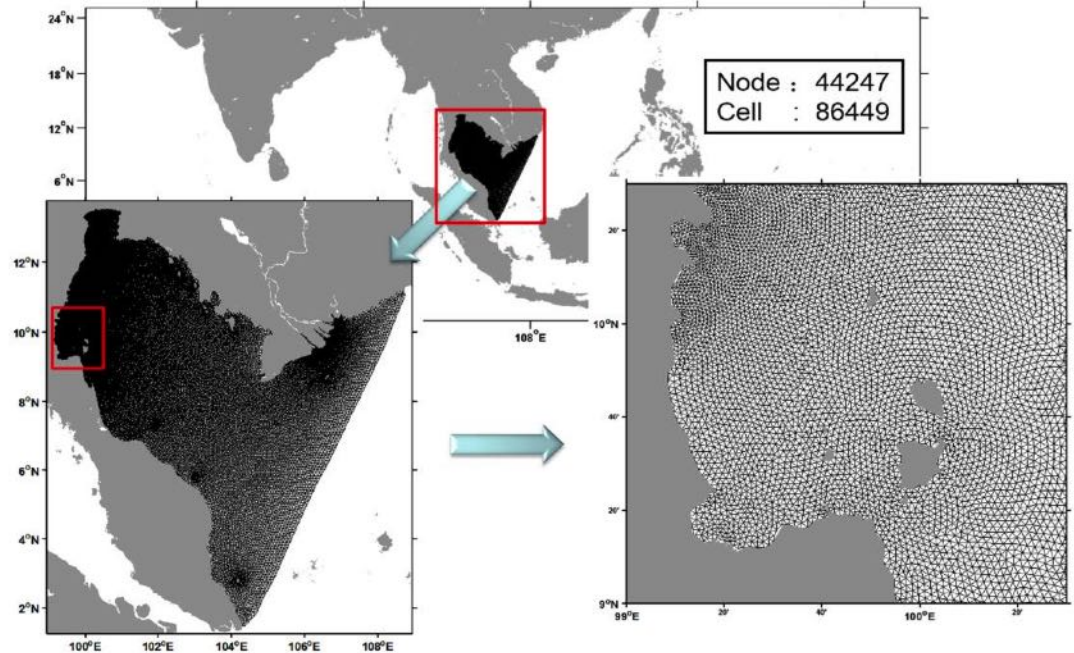

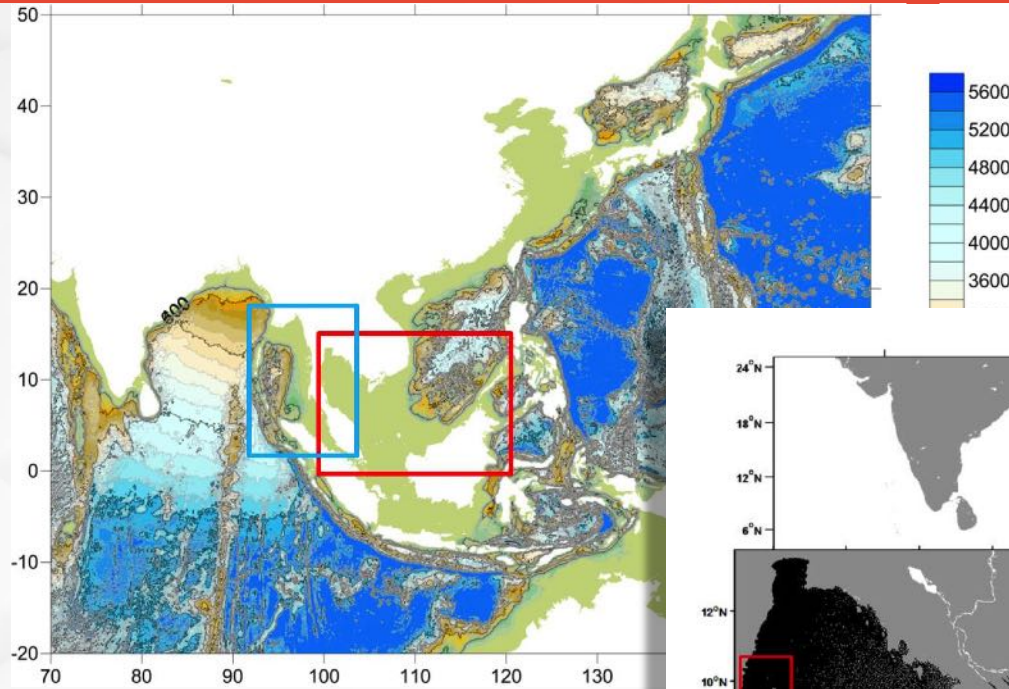

OFS practicing – Oil spill

The Gulf of Thailand have several oil rig that might be risk if it's leaked
OFS can provide initial condition for forecast oil spill

Comparison between simulated virtual oil particles (colored dots) and the reported oil pollution sites (colored circles,) up to April 1, 2018.

High Res OFS

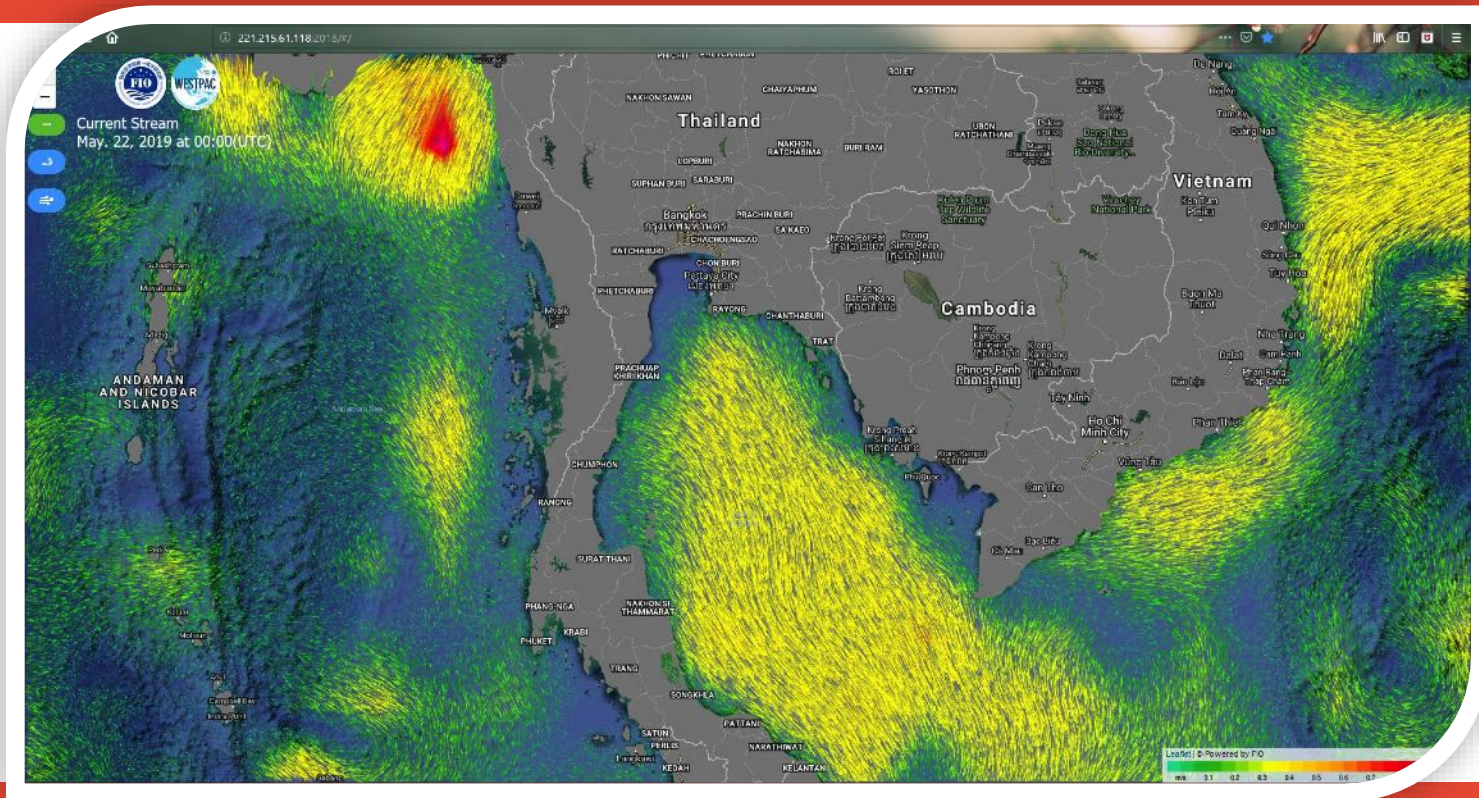

- Testing refined-grid model on OFS's HPC at PMBC
- Seeking to upgrade HPC cores at PMBC
- Arranging local data to set up data assimilation and validation

OFS application

- The forecasting products can be easily accessed through cell phone APP of “Global Ocean On Desk” (GOOD)

OFS application (testing hi res domain)
